Guest Editorial

Preface of ENGE 2012 Special Issue

In September 2012, the International Conference on Electronic Materials and Nanotechnology for Green Environment (ENGE 2012) were successfully accomplished in Jeju Island, Korea. With many distinguished speakers and guests, all participants shared experiences and knowledge in this emerging field of Electronic Materials and Nanotechnology for Green Environment. With 908 abstracts, state-of-the-art results were presented in the field of Energy, Display, Nano Engineering, Electronic Materials and Processing, and Topical Symposium. Scientists from all over the world participated including Australia, China, France, Germany, Japan, Korea, Kuwait, Malaysia, Taiwan, United States, and Vietnam. Organizing committee members would like to give sincere thanks to all the contributors at the conference.

For the celebration and memory of ENGE 2012, conference organizers decided to publish special issues through four different SCI Journals, and Current Applied Physics (CAP) is selected as one of the special issues. This Special Issue focuses on the current hot topics related to applied physics and materials science with 38 selected papers out of 371 submitted papers. We believe that this special issue is valuable to the community of electronic materials.

We would like to express our sincere appreciation again to all the authors who submitted valuable papers to this CAP Special Issue of ENGE 2012.
